

## **Quality Control Log Abbot Binax Now**

School Districts should perform the quality control test once with every new shipment. These will usually be from a single lot. If the boxes are not from a single lot, test each lot separately. You do NOT need to perform quality control on each large (640 units) or small box (40). The positive control is in the silver wrapper in each box. For the negative control just use a clean swab. Keep this log in your Safely Opening School binder or project records.

Shipment	Lot Number	Negative Quality Control	Positive Quality Control
Received Date		Date and Outcome	Date and Outcome
